Knowledge regarding menstrual hygiene among women at NTR Nagar in Nellore

N Subhashini, Arundathi S, V Jayanthi and Arumugam Indira

Abstract
Menstruation is the monthly elimination through a bloody vaginal discharge of a portion of the lining of the uterus that has been prepared to protect and nurture a fertilized egg in the event of pregnancy. The present cross sectional descriptive study was conducted for identifying the knowledge regarding menstrual hygiene practices among women. 100 women selected by non probability convenience sampling technique. Data was collected by using structured questionnaire. Analysis was performed by using descriptive and inferential statistics. The results revealed that majority of women 53(53%) are having moderately adequate knowledge regarding menstrual hygiene practices followed by 30(30%) had inadequate knowledge and only 17(17%) women had adequate knowledge. Hence there is need to educate the women, practice of hygiene during menses.

Keywords: Knowledge, menstrual hygiene, women

Introduction
Menstrual hygiene deals with a woman’s special healthcare needs and requirements during her monthly menstruation or menstrual cycle. Menstrual hygiene deals with a woman’s special healthcare needs and requirements during monthly menstruation or menstrual cycle. Hygiene related practices of women during menstruation are considerable importance as it has a health impact in terms of increased vulnerability to reproductive tract infection (RTI). The interplay of socio economic status, menstrual hygiene practices and RTI are noticeable. Today millions of women are suffers of RTI and its complications and often the infection is transmitted to the off spring of the pregnant mother.

Objectives
- To assess the level of knowledge regarding menstrual hygiene practices among women.
- To associate the level of knowledge regarding menstrual hygiene practices with selected socio demographic variables of women.

Material and methods: Quantitative research approach and cross sectional, descriptive design.100 women were selected by using the non probability convenience sampling technique. After obtaining informed consent from participants the data was collected by using the structured questionnaire and responses were documented. Descriptive and inferential statistics were used for analyzing the data.

Criteria for Sample Selection
Inclusion criteria
- The women in NTR Nagar, Nellore
- Who are willing to participate
- Who are available at the time of data collection
- Who knows Telugu or English

Exclusion criteria: Women who are
- Having acute illness
- Not willing to participate in the study
Description of the tool
The tool was developed with the help of related literature from various text books, journals, website, discussion and guidance from experts.

It consists of two parts:

Part-I: It consists of socio demographic variables
