People, Society, Business & Technology; Challenges and Remedies in Post Era COVID-19

Neha Sheoran

Abstract

The eruption of deadly COVID-19 disease among human in china (Wuhan) and its expansion around the planet largely impacting on the people, society, business and technology. All the resources related to handle-ling the hitting of the virus, additional plan of action are needed to handle the people, society, business and technologies.

COVID-19 is much more than a health crises; it is economic and social crises. World health organization (WHO) has been called COVID-19 as a pandemic which is attacking the people and societies at their core. It continues to affect people who are living in poverty and people conditions, natives, young generation, old people and people with some kind of disabilities. It also affects the migrants and the people with weak immunity.

Keywords: People, Society, Business & Technology, COVID-19

Introduction

After the outburst of COVID-19 among humans in the last month of year -2019 from China is continue to affect the society, people, business and technology. Because of this respiratory syndrome we are facing many challenges and are trying to find remedies of it. We must recollect that the human engagement with epidemics is as old as the hills. From the Spanish Flu (1918-20), HIV (1918) and the Asian flu (1957-58). For the first time Homer used the term "Epidemics" over the returning natives in his work Odyssey writers over the many cases and results of epidemics in their works.

Albert Camus wrote "The plague was posting senturies at the gates and turning away ships bound for Oran". This line by Albert Camus in his allegorical novel indicates that the plagues are coming from the centuries at the gates of the world and turning the lives of the people. How true these words are in today's scenario "many continued hoping that the epidemic would soon die out and they and their families be spared "Means that the epidemic which bursts out die soon and they and their families will not be affected and will be spared by epidemic, and they are not ready to change in their habits and life style. Perhaps the highly infected pandemic in human history is the black death of the 14th century that lasted at the early of 18th the century, appearing again occasionally.

"The Dccameron" composed by Boccaccio in the 14th century, which inspired Chaucer's "The Canterbury Tales". In the introduction Boccaccio witnessed "in this sore the affliction and misery of our city, the reverend authority of the laws both human and divine was all in a manner dissolved and fallen into decay....". In Chaucer's the Canterbury tales the portrayal of plague in "The Pardoner's Tale's" was probably influenced by Boccaccio "The Decameron" although England had been repeatedly damaged by epidemics. Epidemics and human response to epidemic occasionally gained a lighter dimension. In Due Soul as Body, Defoe presents the relating measures taken by the head of a family during a self-quarantine that ends amazing five and half months in 1665. Measures were taken to prevent the family members and home servant from plague infection.

Far off Euro-Centric there were also indigenous accounts of portrayal of epidemics. Hindi writer Suryakant Tripathi's work "A life misspent" portrays a heart touching account of influenza epidemic that damaged India during the early of 20th century. He said that "I travelled to the river bank in Dalmau and waited The Ganga was swollen with dead bodies. At my in-law's house I learned that my wife had passed away".

Malaria is an unavoidable part of rural life in Bengali writer Sarat Chandra Chattopadhyay. Tagore also portrays the plague in his novels. In his work: "*Chaturanga*" (1916). Calcutta was hit by an epidemic. Saachish's uncle converts his home into an infirmary for the poor and while treating the patients he wounded by the disease. In the present time we are facing an epidemic named as COVID-19 and we are facing many challenges because of this plague. Lakhs of people lost their lives and struggling to keep themselves safe from the deadly respiratory disease. They are in search of remedies to overcome deadly infectious virus. Due to the virus people and society are badly affected. This virus totally changed the habits and life of the people and it will take a lot of time to lead a normal life which is before the emergence of COVID-19.

1. Impact on society

COVID 19 has been acting as a restraint in the growth of the sciences as well as the human developments; it has been stopping the developments as there are restrictions on everything. COVID -19 has been an invisible disaster for all as it has not been ever diagnosed and there has never been any vaccine for this pandemic. COVID-19 is one such situation of crisis that has been adversely affecting the intellectuals in both the aspects whether intellectually or physically. There have been cases of mental stress as well as of deterioration of the physical health. The pandemic has been revealing the relevance of the family as the ultimate support system. People have been realizing the importance of the relations as there such situations in which family has acted as the backbone for the suffering ones. The imposed restrictions on the free movements have made people realize the actual essence of the family system and the relations. People earlier used to spend their majority of the time outside the homes but due to the imposed lockdown people were supposed to remain the containment of their four walls. Little pleasures like playing board games and indulging in hobbies like gardening has been fascinating people, there has also been inclination of people's interest in fitness related activities like yoga, aerobics etc.

People have been adopting more organic and generic foods and medicines in order to boost their immunity. World's attention has been drawn towards these herbal remedies and society has been attracted and much more inclination has been visible towards natural ways of curing the diseases. Society has found the more sustainable ways of living. In the post COVID-19 era there will be emphasis on the more hygienic and cleanliness oriented ways of living. Society will also be implementing the more precautionary measures in non-vegetarian ways of eating. Society will be inclined towards the nature's preservation. Cases of animal slaughtering will be less and there will be visible fear in the minds of the people regarding such things. Society will be going back to its roots. Simple ways of living will be adopted. There will be more probabilities of reducing social indifferences as people has understood that the social stairs of the indifferences based on the races, gender, and social classes stand nowhere in the eyes of the god and viruses.

People will be giving more respect to the workers and the staff associated with the fields of works of cleaning and medical facilities will be given their piece of appreciation. Isolation will not be considered as punishment for anyone. People will be happily enjoying their time at homes.

2. Impact on Business

Business will be highly impacted by the crisis in the near future too. Industries associated with cleanliness and medical facilities will be facing an incredible boom whereas other industries like hotel and restaurants will be facing a major decline. There will be vast situations and circumstances of the unemployment as introduction of zero contact will be in trend along with the introduction of the various machines like robotic facilities. Advanced medical sciences will be brought in daily uses. Businesses like import and export will be highly affected; there will be decline in the field of interdependency. All the nations will be focusing on providing the employment opportunities to the natives of the country and there will be hindrances in issuing the visas and the entrance of the foreigners. Business involving the virtual world will be blossoming. The fields providing the facilities of online trading, virtual meetings, and E-Commerce will be facing a definite rise. Enterprises will be focusing more on the quality of the work rather than the works associated with the involvement of numerous of people gathered at one place. The facilities of the work from home will be provided to the employs.

3. Impact on Technology

There will be different kinds of technologies introduced in Post COVID-19 Era and technological advancements will be taking places. Technologies like virtual media and web oriented programs will be more developed and advanced. The gen next technologies will be more innovative. All the accesses to the clouding systems will be improved. In the post-COVID-19 era there will be emphasis on developing the techniques related to less physical contact and more rapid results. This pandemic has thought people the relevance of the advancement of the sciences. Technologies have also faced many hindrances and obstacles in the development and progress due to this time span of crisis and lock down periods moreover these has been considerable decline in the funds and the available grants. There has been an inclination towards the rise of innovation in the areas of the medical helps, facilities. Technologies providing the better diagnostics and treatments will be met with the open arms. There will be less focus on the technologies based on the war missions and instead of the welfare based technologies will be paid attention.

Conclusions

This crisis of COVID -19 has been proving to be successful in slowing of the entire world. It has been a phase of the decreased growth and innovations in all the possible aspects. There has been the considerable downfall in the scientific inventions. The time period of the COVID-19 Era has proved to be the time of introspection and analyses for the mankind as people have been realizing the emphasis of the tenderness of the life. People have focused on the importance of the relations and the value of the family system. In the time of the crisis it has been observed that there can be adoption of the simple ways of living a life even by the most rich and upper strata of the society. COVID -19 has taught society to remember the most significant blood bonds and their part in the lives of people. People in the Post COVID-19 Era will be emphasizing on the accumulation of the wealth of the relations rather than the materialistic wealth and the worldly pleasures. All the

wealth related topics have been sidelined due to the impacts of the virus. In the post COVID-19 Era there will be seen an inclination in the matters of health and medical facilities. People will be interested in expansion of the business related to the virtual world and it will be making significant progress. In the post-COVID-19 era there will be more responsible, caring and loving humans with less money orientation.
